EXHIBIT F

Annabelle Parker

Dear Members of the Prison Commission and the Public,

For this meeting of April 20 2010, I want to ask the Prison Commissioners to please use their power to do their utmost concerning giving medical care to the prisoners of Nevada. As we all know, there are currently civil lawsuits by prisoners and a class action lawsuit by the ACLU in courts in order to make the prison administrations comply with giving necessary medical care to the prisoners they house. This should not have to be, that an ill prisoner has to file a civil lawsuit on his or her own in order to have the prison comply with basic health care. Prisoners have died as a result of lack of medical care.

I am particularly concerned about Marritte Funches (#37050), a kidney patient in High Desert State Prison, who is without any health care, even though High Desert State Prison sent him to the prison doctor, who did nothing but want to touch him in the wrong places, something that other prisoners at High Desert State Prison had also experienced. PLEASE give medical care to Marritte Funches! It has been longer than a year that I have been asking for this, governor, and you have never replied to my letters, nor have you, Mr Skolnik, given orders to have Mr Funches examined by a specialist. And if you have, your personnel is not responding to your requests.

Also, even though Mr Funches was in 2007 cleared by the judge of murdering another prisoner in Ely State Prison in 2004, he remains on High Risk Potential, while his classification points are at the lowest possible points, and he still is incarcerated at the maximum level. why is this not changed? Why is there not a program that he and the many others on lockdown, in maximum units, on administrative or disciplinary segregation can do in order to move towards a less restricted way of incarceration? He and the many others on lockdown are human beings who may one day walk free, they should be reformed and taught about human ethics, they should get training in vocational education so that they can find a job once they get outside again, or training in self-discovery and building up a good mentality.
The prisoners are your responsibility, Mr Skolnik, their health care is in your hands. it is largely in your hands if society is safer and human rights are respected. Society is also inside prisons, where things are not safe at the moment. Society outside will benefit from ex-felons who have gained insights, learned about morality and have gained social skills. This will bring more safety to society outside the walls.

There was a riot in Ely State Prison on january 31st, 2010. One of the reasons was the treatment of a prisoner there, and another is the lack of ways to step out of disciplinary segregation as it was changed in November of 2009 in administrative rule 733. As one of the prisoners on

Unit 4 in Ely State Prison asked:

1) Allow us to purchase these items from the canteen: Vitamins, coffee, soups, peanut-butter, laundry supplies, batteries for our electronic shavers, beanies, thermals and shoes.

2) Allow us one thirty (30) minute call a week, as the policy says.

3) Allow us our first amendment right: receive books sent in from the outside while serving time in disciplinary segregation.

4) Allow us to have a dip bar over our rec yards, for recreational purposes and exercise.

5) Allow us a "contact" visit once a month for family or friends. (they can only have a visit from a family member, behind glass).

6) We would like for all mentally ill and psycho-tropically medicated inmates to be housed separately, preferably on a unit where they can receive the treatment they need.

7) No appliance loss for minor/general rule infractions, no loss of appliances for prisoners found "not guilty"; and only 60 days total for major violations, before all are returned.

8) Allow us to buy Mexico/Canada stamps so we can write our families and friends there.

9) Allow us to be approved to purchase appliances and c.d.'s after 90 days without any rule violations.

10) Provide a level system or steps program to allow prisoners to advance through the means of good behavior, and to get out of lockdown.

In summary:

A.R. 733 needs to be modified and a level system needs to be put in place, all mentally ill inmates need to be housed separately, on a unit where they can receive the treatment they need. These (10) things are all the prisoners ask for.

In conclusion I want to say this:

Stop the lockdown situations in Ely State Prison and in other prisons in Nevada, provide a

level system so that prisoners can improve themselves and are rewarded in stead of sanctioned even more.

Give health care to prisoners that is reliable and sufficient, and do not use medical care as a way of punishment, by withholding it, which is now obviously being done in this prison system.

Give fresh vegetables and fruit on a daily basis, so that health care is naturally being done via the food. Also give out cleaning products so that the prison can be cleaned, and provide enough toilet paper, (specifically High Desert State Prison has a reputation of being very dirty / unhygienic). One toiletroll a week is not enough!!

Improve the libraries with more non-fiction books, educational books, and make the law library more accessible and better. Provide or cooperate with a 'books to prisoners' program. Drop the system that a prisoner has to have a book pre-approved by the administration. Books are good and keep the brains occupied and trained.

Also:
Improve the prisoners in education, learning programs, instead of letting their brains die in 24-hour lockdowns.

Also:
Prisons cost money. If you decide to have long sentences and many prisoners, the consequence is that you have to pay for this system. Prisoners are human beings like you and me and they should be improved in morals, not killed by lack of money and care. If you have a budget problem, it is the system that has brought it on. Change it.
