## 200,000 Sagebrush to be planted in Nevada thanks to Sagebrush in Prisons Project

Thanks to a partnership between the Nevada Department of Corrections, Bureau of Land Management, and Institute for Applied Ecology, more than 200,000 Sagebrush will be planted in Nevada wilderness scarred by wildfire.

The Sagebrush in Prisons Project is a nationally-recognized program where inmates at correctional centers in Carson City and Lovelock raise Sagebrush from seeds to the planting stage. Then, BLM staff and private contractors plant the Sagebrush in wilderness areas ravaged by fire.

"This is a great program for our inmates because they gain horticulture skills while developing the patience and investment necessary to raise Sagebrush," said Harold Wickham, NDOC's Acting Director. "This is also a great program for Nevada because it rehabilitates fire-scarred areas while restoring Sage-grouse habitat."

It was for this reason that a dozen inmates carefully package 80,000 Sagebrush for transport on a cold and cloudless day at Warm Springs Correctional Center in Carson City.

**Shannon Swim, Institute for Applied Ecology, works with a NDOC inmate at Warm Springs Correctional Center in Carson City, to package Sagebrush for their eventual planting in Nevada wilderness areas.**

One of these inmates, Patrick McKinnon, said he liked the hands-on nature of the work. "We micro-managed the plants during every step of the way, checking their PH levels and

*The Nevada Department of Corrections is committed to building a safer community by striving to incorporate progressive best practices in all aspects of corrections. NDOC houses nearly 14,000 persons with felony convictions in 18 facilities statewide. For more information visit [www.doc.nv.gov](http://www.doc.nv.gov).*

soil-water content every day. We covered them with tarps when the weather got bad. All of this work prepares the Sagebrush for the day they can be replanted. We feel good about doing something that benefits the state.”

McKinnon and his fellow inmates worked under the watchful eye of Shannon Swim, the Institute for Applied Ecology’s Nevada contractor who trains and works directly with the inmates at each NDOC facility.

“The inmates put their blood, sweat, and tears into raising the Sagebrush,” Swim said. “They know that wildfires kill Sagebrush down to the root, and if we don’t replant scarred areas with Sagebrush, invasive Cheatgrass will move in. This is an important program, and the inmates spend months raising the Sagebrush and preparing them for planting.”

This year’s planting will occur in November, and focus on areas scarred by the Martin Fire, which burnt 435,000 acres north of Winnemucca in July 2018.
