Notes:
 Housing units at ECC are pre-manufactured modular units.
 This is the legal configuration of this camp as verified by the original drawings. However, the current layout may be different in practice.
 In April of 2018, 6 overflow beds are removed from this camp.

Notes: Pursuant to "Stickey" case law, the capacity of Units 1-3 cannot exceed 172 each. This case law allows for the capacities to be increased to 220 if one additional roving officer is added to each unit per shift.
 In April of 2019, the special care population (SCU) was moved from Unit 6 to Unit 3, C Wing. This resulted in a loss of 60 medium beds and a gain of 30 close custody beds in Unit 6. This change enabled the facility to house the excess RMF population.
 In addition: 10 overflow beds were removed from Unit 7 and will be reinstated in July of 2019 when additional retrofitting projects take place.

Notes:

This transitional house opens in October 2015 to accommodate offenders that are in the process of re-entering the community.
 Beds A-1-A through A-1-D are minimum custody beds.
 The camp informed OMD that minimum beds are located in Unit 2. Thus, 4 minimum beds were removed from Unit 2, and the distribution of beds in Unit 2 was changed from 16 community trustee beds to 4 minimum and 12 community trustee beds.

Notes: Unit 6, D Wing changed from GP Level III to Level II.
 As of December 2018, Unit 7, A Wing began to double bunk individuals housed for protective reasons.
 Unit 11, B Wing also houses the RISE program.

Notes: The boot camp program that was offered at this facility in Unit, C and D Wings, was transferred to Casa Grande Transitional Housing. These wings now house general population, minimum custody inmates. This measure will allow the NDOC to consolidate inmate programs and more efficiently utilize its resources.

Nevada Department of Corrections

Definitions of Capacity

| Capacity | Definition | Room Type |
|--------------------|--|--|
| Base Structure | The NDOC utilizes the Nevada Public Works Board bed capacity numbers, as designed, and these numbers do not change over time. This concept assumes that there is one inmate per bed, and capacity utilization is at no more than 100%. | ◆ Cells. The NDOC follows the definition established by the Public Works Board, which is one inmate per cell or single-occupied cells in a housing area. |
| | | ◆ Camps/dorms. Dormitory capacity is established by the Public Works Board during the design and construction phases. Dorm style housing areas are intended to be shared by multiple inmates |
| Operating Capacity | This concept assumes that every other cell houses two prisoners, on the average. The outcome is at least 150% utilization of the cell capacity of a given housing area. However, specialized housing units are excluded from this ratio calculation. Housing areas intended to accommodate special populations, such as segregation, mentally or medically ill, or death row inmates who are single-celled for security and safety. | |
| Emergency Capacity | This concept assumes that more than every other cell houses two prisoners, on the average. The outcome is at least 168% utilization of the cell capacity of a given housing area. However, specialized housing units are excluded from the base and/or total capacity and from this ratio calculation. Housing areas intended to accommodate special populations, such as segregation, mentally or medically ill, or death row inmates are single-celled for security and safety. | |
| Emergency Overflow | This concept assumes that more than every other cell houses two prisoners, on the average. The outcome is more than 150% utilization of the cell capacity of a given housing area. However, specialized housing units are excluded from the base and/or total capacity and from this ratio calculation. Housing areas intended to accommodate special populations, such as segregation, mentally or medically ill, or death row inmates are single-celled for security and safety. | |
| Total Beds | This is the sum of emergency capacity and emergency overflow beds. Total beds divided by base structure is the percentage utilization of space to bed design. | |
