Methodology

The model begins with the physical capacity of all its prisons and camps at the beginning of the biennium.

The in-house correctional population projection jointly prepared by the JFA Institute and the Nevada Department of Corrections is entered into the model along with the first two years of projects and initiatives illustrated in the corresponding ten-year capital improvement plans for male and female prisoners.

The custody distribution for the upcoming biennium is projected and entered into the model to forecast the demand for prison beds by gender and custody level.

An output table will derive the projected number of offenders to be housed at each correctional site each month as well as the monthly average of offenders for each fiscal year in the biennium.

For each correctional site, only the months in which inmates are housed are included in the calculation of the average. Thus, if a site opens in August, the monthly average for the fiscal year will be calculated by including the months of August through June.
